

872 TURBO-PRINT PRINTER USED ON KWIK LOK 872 ENCORE AND 872 LABELMASTER AUTOMATIC BAG CLOSING MACHINES

[Print Friendly](#)

STATE OF THE ART COMPUTERIZED PRINTING

Squid Ink's Printer has been designed for the 872 Kwik Lok Bag Closing Machines. The Printer provides the packager the ability to close bagged packages and print price/freshness/product traceability codes on their package with one compact and efficient system.

The 872 Turbo-Print System incorporates the latest technology in the field of hi-resolution, small character coding. The Printer will provide the packager with quality coding, durability and modularity unlike any printing system on the market today. One ink cartridge will print millions of closures.

The 872 Turbo-Print uses no hazardous chemicals and does not require the use of chemicals to dry the ink.

Using industry proven shared-well piezo technology, the 872 Turbo-Print offers better print quality than competitive dot-matrix, CIJ or hi-res printing systems.

Scan pre-programmed print layouts into the 872 Turbo-Print. The unit makes it easy to recall various print layouts. Each different layout is assigned a simple bar code. The layout can then be printed and stored on the packaging line. The operator then simply scans in code to be printed using a hand scanner (optional) and the correct print set-up is automatically loaded into the printer. Fast and easy loading of messages saves time and insures greater accuracy.
