Bag Closure

Series TF Closure-Label

Series "JM-NRP" (Medium Duty)
Series "KM-NRP" (Heavy Duty)
Bag Closure

Series PF Closure-Label

Series CJF Closure-Label

The 087B closes bag with the regular all-plastic Kwik Lok Closure and can also be run with any of three label sizes. Optional label cassettes are required to run closure-labels. The 087B is easy to operate and will close bags at speeds up to 30 bags per minute. The mechanics of this machine is similar to other Kwik Lok semiautomatic machines - the operator places the open bag into the machine, the closure is applied and the operator withdraws the closed bag, which advances the next closure into the closing position.

The 087B is engineered with the same high quality standards as Kwik Lok's automatic bag closing machines, yielding years of trouble-free, dependable operations.

PRINT YOUR OWN LABELS ON DEMAND!

Series P-200 Closure-Label

The 087B can be used in conjunction with our 884 Thermal Printer. The 884 Printer will print bar codes and other text information on the closure-labels allowing you to substantially reduce your label inventories and print the exact labels when you need them. After printing the labels in the 884 Printer you can move the labels to your packaging line(s) and close your bags with the closure-labels.
